

OUR HOPE IS TO EDUCATE, EMPOWER, AND ENABLE THE IMMUNOCOMPROMISED

The immune suppressed
should not just "survive",
they should THRIVE!

Think of me Please®
is dedicated not only
to awareness,
but CHANGE!

How does Think of me Please®
help the immunocompromised
population?

We provide support through our
network and act as a central hub,
offering community connection,
resources for improving the patient
experience, advocacy tools, and a
place to find the latest news and
research that impacts the
immunocompromised community.

Think of me Please® also provides a
support network for caregivers to
connect with one another, share their
experiences, find support, and grow in
their abilities to care not only for the
people they love, but also themselves.

Think
OF ME
Please™

Bringing awareness to
the struggles of
immunocompromised
individuals and their
communities

DR. DANIEL LAYISH

MD,FACP,FCCP,FAASM
Pulmonologist

Board Member and
Medical Advisor for
Think of me Please ©

There are 3 immunocompromised individuals in the picture below. Can you tell who they are?

Seven million people, roughly 3% of the population in the United States, are considered moderately to severely immunocompromised.

Bay Cox lives with a condition known as Nephrotic Syndrome

HELPFUL GUIDELINES

- WASH OR SANITIZE YOUR HANDS FREQUENTLY
- IF YOU ARE SICK, PLEASE DO NOT INTERACT WITH ANYONE THAT IS IMMUNOCOMPROMISED
- OBTAIN ALL VACCINES AND BOOSTERS
- WEAR A FACE MASK IN A CROWD
- THOROUGHLY WASH ALL FRUITS AND VEGETABLES
- KEEP ANY CUTS CLEAN AND DRY
- DRINK BOTTLED, BOILED, OR FILTERED WATER ONLY
- DRINK ONLY PASTEURIZED MILK AND DAIRY

What does it mean to be immunocompromised?

The immune system of children or adults doesn't work properly to protect them from illnesses.

Infections are more frequent and can be more severe and longer lasting. Exposure to common, everyday viruses and bacteria can be dangerous.

OTHER CONSIDERATIONS

- Do not decorate with live plants
- Minimize dust accumulation
- Understand how to care for indwelling devices
- Frequent cleaning of clothes and bed linens

Personal Health:

- Good oral and dental care
- Rest
- Eat a well-balanced diet
- Never handle animal excrement
- Know the signs and symptoms of infection and contact a healthcare professional if an infection is suspected.
